

1 1. The method of composing information comprising the
2 steps of:

3 (a) providing a set of information segments;

4 (b) arranging the set of information segments into an
5 input sequence;

6 (c) selecting an information transfer location;

7 (d) repetitively moving the input sequence of
8 information segments past the transfer location while visually
9 displaying at least those segments that are approaching the
10 transfer location;

11 (e) copying selected ones of the information segments
12 as they arrive at the transfer location; and

13 (f) arranging the information segment copies into an
14 output sequence that constitutes a meaningful information body.
